## Waste Water

### Submersible Motor Pump

## Amarex KRT

#### Main applications

- Waste water management
- Service water supply systems
- Disposal
- Waste water treatment plants
- Sludge disposal

#### Fluids handled

- Waste water with faeces
- Activated sludge
- Digested sludge
- Raw sludge
- Gas-containing liquids
- Industrial waste water

#### Operating data

##### Operating properties

| Characteristic    | Value                 |           |
|-------------------|-----------------------|-----------|
| Flow rate         | Q [m <sup>3</sup> /h] | ≤ 10080   |
|                   | Q [l/s]               | ≤ 2800    |
| Head              | H [m]                 | ≤ 120     |
| Fluid temperature | T [°C]                | ≤ +60     |
| Motor rating      | P <sub>2</sub> [kW]   | 0,8 - 850 |

#### Design details

##### Design

- Fully floodable submersible motor pump
- Not self-priming
- Close-coupled design

#### Drive

- Three-phase asynchronous squirrel-cage motor
- Motors integrated in explosion-proof pump sets are supplied in Ex d IIB type of protection.
- Enclosure: IP68 to EN 60529/IEC529

#### Shaft seal

##### Standard bearings:

- Two bi-directional mechanical seals in tandem arrangement, with liquid reservoir

##### Reinforced bearings:

- Two bi-directional mechanical seals in tandem arrangement, with leakage chamber

#### Impeller type

- Various application-oriented impeller types (⇒ Page 13)

#### Bearings

- Various application-oriented bearings (⇒ Page 8)

##### Standard bearings:

- Grease-packed bearings sealed for life
- Maintenance-free

##### Reinforced bearings:

##### Drive end:

- Grease-packed bearings sealed for life
- Maintenance-free

##### Pump end:

- Grease-lubricated bearings
- Can be re-lubricated

#### Designation

##### Example: Amarex KRT K 150-503/155 4 UN G-D IE3

##### Designation key

| Code       | Description  |
|------------|--|

### Description of materials

#### Grey cast iron EN-GJL-250 (lamellar graphite cast iron)

Lamellar graphite cast iron to EN 1561 is the most widely used cast material for handling municipal sewage, waste water and sludges as well as stormwater and surface water. It is suitable for neutral fluids which are only slightly aggressive and cause little wear. The pH should be  $\geq 6.5$ , the sand content  $\leq 0.5$  g/l.

#### Duplex stainless steel (1.4517 or technically equivalent material)

This type of carbon steel is resistant to cavitation, has excellent strength values and is used for high circumferential speeds. An excellent resistance to pitting corrosion makes ferritic-austenitic stainless carbon steel a popular choice for pumping acidic waste water with a high chloride content as well as seawater and brackish water. Thanks to its good chemical resistance, e.g. against waste water containing phosphorous and sulphuric acid, this material is used in a wide range of applications in the chemical industry and process engineering. Pumps made of duplex stainless steel have a very long service life, even when handling brines, chemical waste water (pH 1 - 12), grey water and landfill leachate.

#### Wear-resistant white cast iron (EN-GJN-HB555 [XCR14] or technically equivalent material)

Wear-resistant white cast iron is suitable for handling highly abrasive fluids containing sand, ash or iron ore sinter, for example. It has a Rockwell hardness of 61.5 to 68, which is higher than that of hardened chrome steel. Owing to its hardness, the chromium-molybdenum alloy cast iron features a notably higher wear resistance than EN-GJL-250 grey cast iron and other cast materials.

- 
- 3) For D impeller  
 4) D impeller: EN-GJL-250, with hardened edges  
 5) For E impeller and K impeller  
 6) Equivalent to 1.4571
-

### Product benefits

- Absolutely water-tight resin-sealed cable entries prevent any water from entering the motor – even in the event of a damaged cable.
- Reliable operation ensured by leakage sensors signalling any ingress of moisture into the motor
- Reliable operation ensured by sensors monitoring the motor temperature and preventing overheating
- Non-clogging low-maintenance design with large free passages reduces clogging risk and, consequently, maintenance work.
- High-efficiency motors and variable hydraulic systems for optimum hydraulic efficiency and energy efficiency

#### Material variants C1 and C2:

- Long service life due to corrosion-resistant wetted parts made of stainless steel

### Acceptance tests and warranty

#### Functional test

- Every pump undergoes functional testing to KSB standard ZN 56525.
- Operating data is guaranteed to DIN EN ISO 9906 / HI / 2B.

#### Acceptance inspections/tests

- Acceptance test to ISO/DIN or comparable standards available against a surcharge.

#### Warranty

- Quality is assured by means of an audited and certified quality assurance system to DIN EN ISO 9001.

#### Selection information

- The indicated heads and performance data apply to material variant G, for fluids with a density  $\rho = 1 \text{ kg/dm}^3$  and a kinematic viscosity  $\nu \leq 20 \text{ mm}^2/\text{s}$ .
- For hydraulic acceptance tests of different material variants reduce the documented efficiencies by 2 percent.

#### Impeller type

- S, F, E, and D impellers can only be supplied with the documented impeller diameters. Indicate the pump set designation and the impeller diameter in the purchase order.
- K impellers are trimmed to the duty point. Indicate the H/Q data or the impeller diameter in the purchase order. In the hydraulic selection program, the impeller diameter is automatically computed based on the H/Q data and added to the designation of the pump set.

#### Pump input power

- Adjust the power input to the density of the fluid handled:  

$$P_2 \text{ (required)} = \rho \text{ [kg/dm}^3\text{] (fluid handled)} \times P_2 \text{ (documented)}$$
- Select the operating point with the largest power input within an operating range. Select a motor size providing a power reserve to compensate the tolerances in the system characteristic / pump characteristic.

#### Recommended motor power reserve<sup>7)</sup>

| P <sub>2</sub><br>[kW] | Reserve         |                         |
|------------------------|-----------------|-------------------------|
|                        | Mains operation | With frequency inverter |
| ≤ 30                   | 10 %            | 15 %                    |
| > 30                   | 5 %             | 10 %                    |

- For installation types D and K (with cooling jacket) a power reserve of 1.5 kW must always be added for the cooling circuit.

**i** In the case of waste water, too low a flow velocity in the discharge line will lead to clogging and increased wear. The flow velocity in the vertical riser must not fall below 2 m/s.

**i** In the case of waste water, too low a circumferential speed of the impeller will lead to clogging of the hydraulic system (frequency inverter operation). A minimum circumferential speed (measured at the impeller diameter) of 12 m/s must be observed.<sup>8)</sup>

7) If larger power reserves are stipulated by local regulations, these larger reserves must be provided.

8) For F impellers, a circumferential speed below 12 m/s is permissible.

## Overview of product features / selection tables

**Impellers**

|   |   |   |
|---|---|---|
|  | Impeller with cutter<br>(impeller type S/S-max) | <b>Suitable for the following fluids:</b><br>fluids containing coarse substances and/or long fibres |
|---|---|---|

Further fluids (impeller type S/S-max):

- Domestic waste water
- Grey water
- Waste water with faeces

|   |   |  |
|---|---|--|
|  | Free-flow impeller<br>(impeller type F/F-max)               | <b>Suitable for the following fluids:</b><br>fluids containing solids and stringy material as well as fluids with entrapped air or entrapped gas |
|  | Closed single-channel impeller<br>(impeller type E/E-max)   | <b>Suitable for the following fluids:</b><br>fluids containing solids and stringy material   |
|  | Open, diagonal single-channel impeller<br>(impeller type D) | <b>Suitable for the following fluids:</b><br>fluids containing solid substances and long fibres  |

Further fluids (impeller types F/F-max, E/E-max, D):

- Activated sludge
- Digested sludge
- Heating sludge
- Mixed water
- Raw waste water
- Raw sludge
- Recirculated sludge

|   |  |  |
|---|--|--|
|  | Closed multi-channel impeller<br>(impeller type K/K-max) | <b>Suitable for the following fluids:</b><br>contaminated, solids-laden, non-gaseous fluids without stringy material |
|---|--|--|

Further fluids (impeller type K/K-max):

- Activated sludge
- Landfill waste water
- Industrial waste water
- Industrial waste water
- Mechanically treated waste water
- Pre-screened waste water
- Stormwater

## Table of fluids handled

The table below for your guidance is based on KSB's long-standing experience. The data are standard values and are not to be considered as generally binding recommendations. More detailed advice is available from KSB. Make use of our laboratory's expertise when selecting materials.

Selection aid for materials and hydraulic systems per fluid

| Fluid handled <sup>24)</sup>                    | Recommended material | Recommended impeller type <sup>25)</sup> | Comments, further recommendations   |
|---|----------------------|--|---|
| Grey water                                      | Grey cast iron       | K/K-max, D, E/E-max, F/F-max             | Free passage > any solids contained, possibly pre-screened                          |
| River water                                     | Grey cast iron       | K/K-max, D, E/E-max, F/F-max             | Free passage > any solids contained, possibly pre-screened                          |
| Stormwater                                      | Grey cast iron       | K/K-max, D, E/E-max, F/F-max             | Free passage > any solids contained, possibly pre-screened                          |
| Waste water                                     |                      |  |   |
| ▪ Untreated municipal waste water               | Grey cast iron       | F/F-max, S/S-max, D, E/E-max, K/K-max    | ATV <sup>26)</sup> recommends a free passage of 100 mm; minimum free passage: 76 mm |
| ▪ Containing air and gas                        | Grey cast iron       | F/F-max                                  | Up to 8 %, contact KSB for handling fluids with high outgassing rates               |
| Sludges   |                      |  |   |
| ▪ Raw sludge                                    | Grey cast iron       | F/F-max, D, E/E-max                      | Pumpable up to a dry substance content of: 13 % (D), 8 % (F), 6 % (E)               |
| ▪ Digested sludge                               | Grey cast iron       | F/F-max, D, E/E-max                      | Pumpable up to a dry substance content of: 13 % (D), 8 % (F), 6 % (E)               |
| ▪ Activated sludge                              | Grey cast iron       | D, K/K-max                               | Pumpable up to a dry substance content of: 13 % (D), 5 % (K)                        |
| Industrial waste water containing:              |                      |  |   |
| ▪ Paint suspensions                             | Grey cast iron       | K/K-max                                  | Solvent-free, observe the operator's instructions.                                  |
| ▪ Lacquer/paint/varnish suspensions             | Grey cast iron       | F/F-max, E/E-max                         | Solvent-free, contact KSB for silicone-free version                                 |
| ▪ Fibrous material                              | Grey cast iron       | F/F-max, S/S-max, D                      | -   |
| ▪ Chips/swarf                                   | Grey cast iron       | K/K-max, F/F-max                         | Material variant G2 or GH, special mechanical seal; solids content < 5 g/l          |
| ▪ Abrasive substances <sup>27)</sup>            | Grey cast iron       | K/K-max, F/F-max                         | Material variant G2 or GH, special mechanical seal; solids content < 5 g/l          |
| Mildly acidic industrial waste water            | Grey cast iron       | K/K-max, F/F-max                         | ≥ 6.5 material variant G1 and FPM (Viton) O-rings                                   |
| Non-corrosive waste water                       |                      |  |   |
| ▪ Ammonium water                                | Grey cast iron       | K/K-max                                  | -   |
| ▪ Ammonium hydroxide 5 % NH <sub>4</sub> OH     | Grey cast iron       | K/K-max                                  | -   |
| ▪ Urea 25 % (NH <sub>2</sub> ) <sub>2</sub> -CO | Grey cast iron       | K/K-max                                  | -   |
| ▪ Potassium hydroxide 10 % KOH                  | Grey cast iron       | K/K-max                                  | -   |

24) For any fluids which are not listed in this table contact KSB.

25) The first impeller type listed should be given preference.

26) ATV = German regulatory body for waste water management

27) Severe hydroabrasive wear occurs if solids contents of approx. 0.5 g/l or higher are combined with circumferential speeds exceeding 20 m/s or part load conditions to the left of the duty point.

| Fluid handled <sup>24)</sup>   | Recommended material           | Recommended impeller type <sup>25)</sup> | Comments, further recommendations   |
|--|--------------------------------|--|---|
| ▪ Calcium hydroxide 5 % Ca(OH) <sub>2</sub>  | Grey cast iron                 | K/K-max                                  | -   |
| ▪ Sodium hydroxide 5 % NaOH  | Grey cast iron                 | K/K-max                                  | -   |
| ▪ Sodium carbonate 30 % Na <sub>2</sub> CO <sub>3</sub>  | Grey cast iron                 | K/K-max                                  | -   |
| Non-corrosive waste water containing:  |                                |  |   |
| ▪ Aliphatic hydrocarbons, e.g. oils, petrol, butane, methane   | Grey cast iron                 | K/K-max                                  | -   |
| ▪ Aromatic hydrocarbons, e.g. benzene, styrene   | Grey cast iron                 | K/K-max                                  | FPM (Viton) O-rings <sup>28)</sup>  |
| ▪ Chlorinated hydrocarbons (e.g. tetrachloroethylene, ethylene chloride, chloroform, methylene chloride) | Grey cast iron                 | K/K-max                                  | FPM (Viton) O-rings <sup>28)</sup>  |
| Highly abrasive industrial waste water causing wear (chemically neutral) <sup>29)</sup>                  |                                |  |   |
| ▪ Lime water   | Wear-resistant white cast iron | K/K-max                                  | Sinter contents < 5 g/l: material variant GH<br>Sinter contents > 5 g/l: material variant H     |
| ▪ Lime milk containing quartz and pigment suspensions  | Wear-resistant white cast iron | K/K-max                                  | Lime milk contents < 15 %: material variant GH<br>Lime milk contents > 15 %: material variant H |
| ▪ Wash water containing solids   | Wear-resistant white cast iron | K/K-max, F/F-max                         | Material selection based on fluid analysis  |
| ▪ Waste water containing dust or ash   | Wear-resistant white cast iron | K/K-max                                  | Material selection based on fluid analysis  |
| Water/sand mixture   | Wear-resistant white cast iron | K/K-max, F/F-max                         | Solids contents < 5 g/l: material variant GH<br>Solids contents > 5 g/l: material variant H     |
| Seawater   | Duplex stainless steel         | K/K-max, F/F-max                         | Material variant C2 ≤ 25 °C fluid temperature <sup>30)</sup>                                    |
| Brackish water   | Duplex stainless steel         | K/K-max, F/F-max                         | Material variants C1 or G1 (with 250 µm two-component epoxy resin), depending on salt content   |
| Corrosive industrial waste water   | Duplex stainless steel         | K/K-max, F/F-max                         | Material variants C1 or C2, depending on fluid analysis   |

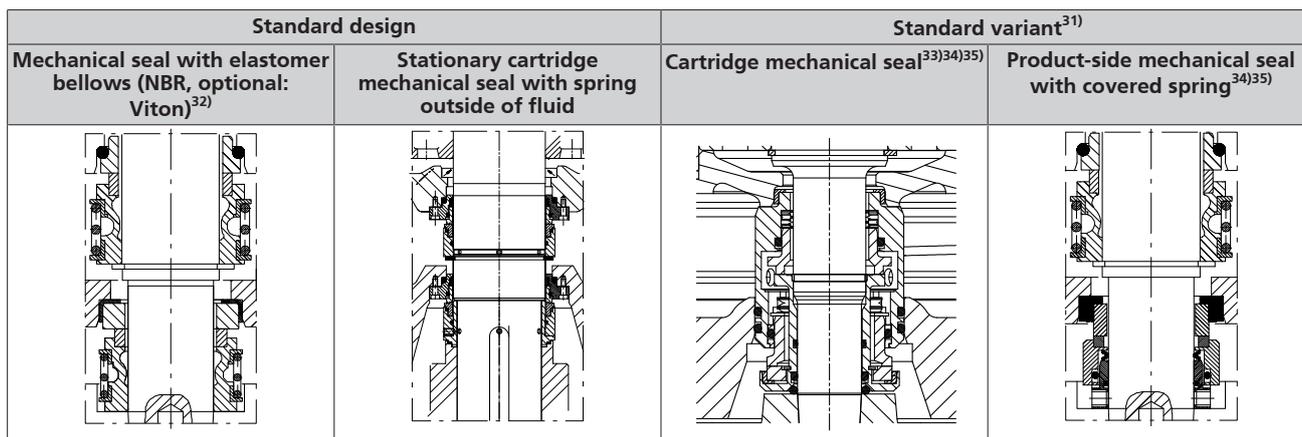

28) The hydrocarbons mentioned may occur in very high concentrations due to the difference in specific weight and their low solubility. If this is the case, contact KSB.

29) The required material variants highly depend on the operating hours, rotational speed and flow velocity.

30) Higher fluid temperatures on request.

31) A surcharge and longer delivery times apply to standard variants.

32) For all types of waste water

33) For a maximum nominal impeller diameter of 315 mm only available in combination with motor generation "E"

34) For very abrasive fluids or fluids containing metallic particles (e.g. shavings from drilling)

35) Standard on material variants H and C2 (optionally available for material variants G, G1, G2, GH and C1)

36) Data applies to maximum impeller diameter and impeller with water fill.

37) Permissible operating pressure = inlet pressure + pressure at Q = 0

## Installation types

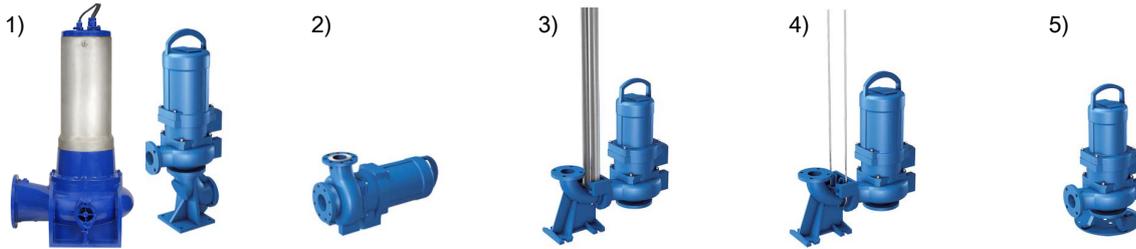

Fig. 1: Installation types

|   |  |
|---|--|
| 1 | Installation type D: stationary dry installation, vertical (S1 duty)   |
| 2 | Installation type H: stationary dry installation, horizontal (S1 duty)   |
| 3 | Installation type K: stationary wet installation (S1 duty with motor outside of the fluid possible) with guide rail arrangement<br>Installation type S: stationary wet installation (S1 duty with submerged motor) with guide rail arrangement |
| 4 | Installation type K: stationary wet installation (S1 duty with motor outside of the fluid possible) with guide wire arrangement<br>Installation type S: stationary wet installation (S1 duty with submerged motor) with guide wire arrangement |
| 5 | Installation type P: wet installation of transportable model (S1 duty with submerged motor)  |

### Pump sets of installation types D, H and K

are suitable for continuous duty with the motor outside the fluid. Cooling is effected by means of air convection. Versions with a cooling jacket have an additional internal cooling circuit.

### Pump sets of installation types P and S

are designed for continuously submerged operation. The motor is cooled by the fluid handled on the motor surface. Operation with the motor outside the fluid handled is possible for short periods.

## Scope of supply

### Stationary dry installation - vertical (installation type D)

- Pump set complete with power cables
- Duckfoot bend with inspection hole<sup>38)</sup> and fasteners
- Optional: suction elbow with inspection hole

### Stationary dry installation - horizontal (installation type H)

- Foundation rails
- Suction-side flanged spacer with inspection hole<sup>39)</sup> (optional)

### Stationary wet installation (installation types K and S)

- Claw with sealing elements and fasteners
- Lifting rope, lifting chain or lifting bail (optional)
- Mounting bracket with fasteners
- Duckfoot bend with fasteners
- Guide wire / guide rail  
(guide rails are not included in KSB's scope of supply)

### Transportable wet-installed model (installation type P)

- Foot plate or pump stool with fasteners

38) For nominal discharge nozzle diameter  $\geq$  DN 100

39) For nominal discharge nozzle diameter  $\geq$  DN 100

General assembly drawings with list of components

Amarex KRT, motor type 1

For the motor type assigned to the motor see (⇒ Page 20)
